CA Scores at Exeter Chiefs New Rugby Ground

Exeter Chiefs' new and improved stadium, purpose built to ensure that the rugby club can provide all of the amenities necessary to be considered for a premiership position, is now home to some superb playing and training facilities and features an extraordinary grandstand.

Offering design flexibility and durability, CA's powder coated 3mm fascia flashings were chosen to provide the finishing touches to the development. The particularly large size of the flashings created the distinctive and eye catching imitation of structural steelwork that was desired, whilst the high performance materials used and superior manufacturing techniques adopted will ensure the products' reliability and efficiency.

CA's flashings are manufactured in a variety of sizes and a range of materials, including aluminium, stainless steel and pre-finished steel.

Corus Colorcoat HPS200 Ultra® and Colorcoat Prisma® pre-finished steel can be specified to ensure long-term performance and peace of mind.
